## **Power restored to almost all homes and businesses in the Christchurch region**

Work continued today to restore power to Orion's customers affected by cuts after strong winds brought power lines down on Saturday morning.

"Fewer than 50 customers remain without power, down from 300 this morning. We expect to get most of those back on tonight. A small number will have their power restored tomorrow and the electricity network should be back to normal by then," says Orion chief executive Rob Jamieson.

"Most of the remaining faults affect only one or two customers each, so progress isn't as rapid as earlier when each repair brought power back on to hundreds of customers."

Almost all of the remaining outages are in the rural area inland from Christchurch city. A small number of customers in Christchurch and Banks Peninsula are also affected.

For information about current outages see [www.oriongroup.co.nz/outages.aspx](http://www.oriongroup.co.nz/outages.aspx).

### **About Orion**

Orion New Zealand Limited owns and operates the electricity distribution network in Christchurch and central Canterbury between the Waimakariri and Rakaia rivers and from the Canterbury coast to Arthur's Pass.

There are 11 electricity network companies in the South Island, each covering a distinct area. There is no geographical overlap between electricity network companies. Our neighbouring network companies are Mainpower to the north, Electricity Ashburton to the south and Westpower to the west.

Orion delivers electricity to 190,000 homes and businesses. We do not generate or sell electricity – those functions are carried out by electricity retailers and generators such as Meridian Energy and Mighty River Power. In very simple terms we are a 'transport company',

tasked with distributing electricity within our region. That electricity is supplied to us from Transpower's national grid and is sold to consumers by electricity retailers.

On any given day there are inevitably some power cuts. The nature of electricity means that it is impossible to keep all of the power on all of the time, and we try to strike the right balance between the cost and inconvenience caused by power cuts and the costs to consumers of trying to prevent them.

The laws and regulations that govern electricity distribution companies recognise that on an average day in our region, power cuts that are equivalent to around 400 customers losing power for an hour are to be expected. The regulations also make allowance for those numbers to increase during snow and wind storms and other big weather events.
