## **Good progress made to restore power**

Work has continued this afternoon to restore power to Orion's customers affected by cuts after strong winds brought power lines down early this morning.

"700 remain without power, down from 9,800 this morning. Our repair crews will carry on tonight where it is safe to do so to bring those without power back on," says Orion chief executive Rob Jamieson.

Most of the remaining outages are in the rural area inland from Christchurch city.

For information about current outages see [www.oriongroup.co.nz/outages.aspx](http://www.oriongroup.co.nz/outages.aspx).

This will be our last update today unless the situation changes significantly.

### **About Orion**

Orion New Zealand Limited owns and operates the electricity distribution network in Christchurch and central Canterbury between the Waimakariri and Rakaia rivers and from the Canterbury coast to Arthur's Pass.

There are 11 electricity network companies in the South Island, each covering a distinct area. There is no geographical overlap between electricity network companies. Our neighbouring network companies are Mainpower to the north, Electricity Ashburton to the south and Westpower to the west.

Orion delivers electricity to 190,000 homes and businesses. We do not generate or sell electricity – those functions are carried out by electricity retailers and generators such as Meridian Energy and Mighty River Power. In very simple terms we are a 'transport company', tasked with distributing electricity within our region. That electricity is supplied to us from Transpower's national grid and is sold to consumers by electricity retailers.

On any given day there are inevitably some power cuts. The nature of electricity means that it is impossible to keep all of the power on all of the time, and we try to strike the right

balance between the cost and inconvenience caused by power cuts and the costs to consumers of trying to prevent them.

The laws and regulations that govern electricity distribution companies recognise that on an average day in our region, power cuts that are equivalent to around 400 customers losing power for an hour are to be expected. The regulations also make allowance for those numbers to increase during snow and wind storms and other big weather events.
