

Media statement – for immediate release 3.00pm, 6 July 2013

Progress continues to restore power after strong winds cause cuts

At 2.30pm today power remained out to 1,800 Orion customers affected by cuts after strong winds brought power lines down early this morning. Most cuts were due to trees or branches falling onto lines in rural areas inland from Christchurch.

"By 10.30am we had restored power to more than half of the 9,800 homes and businesses affected overnight, ahead of our noon target. We continue to work as quickly as we can," says Orion chief executive Rob Jamieson.

"There are still more than 25 faults at various locations around our network, each affecting up to 300 customers. It takes time to locate and fix these faults, particularly because of the travel distances across our large rural network."

For information about current outages see www.oriongroup.co.nz/outages.aspx

Our next update will be at 5.30pm.

ENDS

About Orion

Orion New Zealand Limited owns and operates the electricity distribution network in Christchurch and central Canterbury between the Waimakariri and Rakaia rivers and from the Canterbury coast to Arthur's Pass.

There are 11 electricity network companies in the South Island, each covering a distinct area. There is no geographical overlap between electricity network companies. Our neighbouring network companies are <u>Mainpower</u> to the north, <u>Electricity Ashburton</u> to the south and <u>Westpower</u> to the west.

Orion delivers electricity to 190,000 homes and businesses. We do not generate or sell electricity – those functions are carried out by electricity retailers and generators such as Meridian Energy and Mighty River Power. In very simple terms we are a 'transport company',

tasked with distributing electricity within our region. That electricity is supplied to us from Transpower's national grid and is sold to consumers by electricity retailers.

On any given day there are inevitably some power cuts. The nature of electricity means that it is impossible to keep all of the power on all of the time, and we try to strike the right balance between the cost and inconvenience caused by power cuts and the costs to consumers of trying to prevent them.

The laws and regulations that govern electricity distribution companies recognise that on an average day in our region, power cuts that are equivalent to around 400 customers losing power for an hour are to be expected. The regulations also make allowance for those numbers to increase during snow and wind storms and other big weather events.
